1st Choice Healthy Skin & Coat formula is designed specifically to enhance skin condition in all seasons and to produce a soft, shiny coat in both our long-and short-haired cats. Healthy Coat and Skin for Cats Published by VCA Inc. in Cats , Grooming , Pets October 17, 2016 The general condition of your cat's skin and coat are good indicators of its health. Cats are self groomers but still require regular brushing and skin care to avoid matted fur and other skin and coat issues. In addition, regular brushing helps remove loose fur which is otherwise ingested by your cats leading to hair balls which can be a serious medical condition. You can also try boosting the omega-3s in your elder cat's diet, if your vet approves. Be sure to add it to kitty's food, not directly to her fur. "Treat your cat's dry skin and coat from the inside, not the outside," Plotnick says.
