Child mortality Context. In the preceding section we studied life expectancy at birth as a key measure of aggregate health in a population. This measure provides an overview of health outcomes for the average person in a country. WOA! World Population Awareness is a non-profit web publication seeking to inform people about overpopulation, unsustainability, and overconsumption; the impacts, including depletion of natural resources, water, oil, soil, fertilizers, species loss, malnutrition, poverty, displacement of people, conflict; and what can be done about it: women's advancement, education, reproductive health care ... On a global level, the World Bank estimates that although only 54% of the world's population lives in urban areas, more than 80% of all economic production happens in cities.. Urban areas provide a combination of network effects and economies of scale that are referred to as "economies of agglomeration".
