This book presents state-of-the-art research results in the area of formal methods for real-time and fault-tolerant systems. The papers consider problems and solutions in safety-critical system design and examine how well the use of formal techniques for design, analysis and verification serves in relating theory to ...

Formal Techniques in Real-Time and Fault-Tolerant Systems is divided into two parts. The chapters in Part One set the stage for what follows by defining the basic notions and practices of the field of design and specification of fault-tolerant systems. The chapters in Part Two represent the 'how-to' section, containing examples of the use of formal methods in specification and development of fault-tolerant systems.

Klappentext zu „Formal Techniques in Real-Time and Fault-Tolerant Systems“ This is a collection of papers from the Symposium on Formal Techniques in Real-Time and Fault-Tolerant Systems held at the University of Warwick on 22-23 September 1988.
