

Download Imaging Of Children With Cancer

Imaging (Radiology) Tests for Cancer. Doctors use imaging tests to take pictures of the inside of your body. Imaging tests can be used to look for cancer, find out how far it has spread, and to help see if cancer treatment is working. Imaging tests send energy through the body to capture pictures doctors may use to locate and diagnose cancer, to determine whether cancer has spread, and to evaluate whether and to what extent a particular treatment is working. The diagnostic imaging tests we use include those listed below ...Departmental Focus. St. Jude Children's Research Hospital's Department of Diagnostic Imaging is responsible for providing St. Jude patients with state-of-the-art diagnostic and therapeutic imaging based assessments and therapies. The vision of the department is a commitment to world-class radiologic research and patient care in diagnostic radiology. Learn how CTCA uses imaging, such as computed tomography (CT) scans and PET scans, to screen, detect, diagnose and pin-point the tumor to deliver cancer treatment plan.
